CaseWorX Release Notes

Version: 3.5.0.117
Release Date: February 28 – March 4

Enhancements:

This release features an updated UI and improvements to our list table (dropdown list) functionality. These updates and improvements include:

- Date/time fields:
    - To auto-enter today's date, type "t" in the date field.
    - To auto-enter the current time in your local time zone, type "t" in the time field.

- Text boxes display the number of allowed characters.

- Dropdown lists:
    - To view the list values available without changing the selected list value, click the down arrow at the right side of the dropdown field.
    - To clear the selected list value, click the "x" at the right side of the dropdown field.

- Fields outlined in red indicate required fields.

- Clicking on a field header in the quick view of each widget will sort the records in that widget by the field selected.

- Widget height slider allows you to adjust the height of each widget so you can view more records at once without scrolling.

- List values will no longer be updated in Administration > List Values. If you previously had access to this portion of the system, please contact support at support@myfivepoint.com for changes to your list values.
